# IM PLATFORM

## Executive & Technical Handoff Brief

Archive date: 2026-10-09 | Owner / product lead: Bousher Adi

**AUTHORITY BOUNDARY - Continuity/onboarding synthesis only. Exact primary bytes + SHA-256 + formal governance evidence outrank this narrative.**

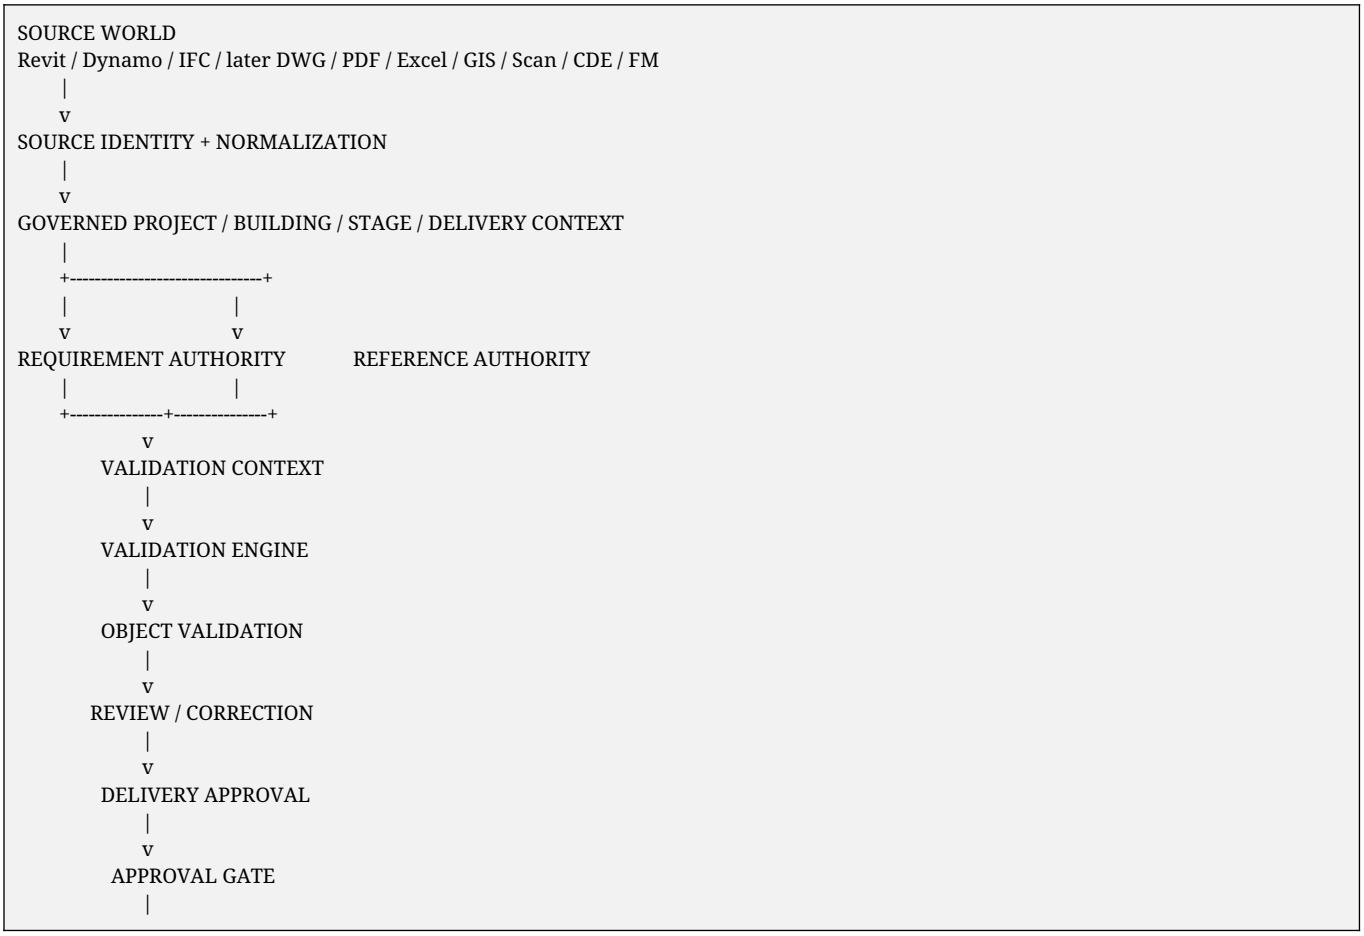

## 1. What it is

IM Platform is an owner-side Information Product Governance Platform that sits between requirements/source deliveries and downstream FM/AIM/GIS/CDE/API/digital-twin use. It governs whether information may become trusted organisational truth.

## 2. Why it matters

- BIM/source data can look correct while required information is missing or stale.
- Requirements, source identity, validation, human review and approval must be bound to exact evidence.
- The platform complements authoring/review tools rather than replacing them.

## 3. Core flow

## 4. What is proven / built

| Area | State |
|---|---|
| Source / Authoring | GREEN in proven source scope; legacy adapters future |
| Acquisition / Adapters | GREEN in proven adapters; more adapters planned |
| Source Identity & Integrity | GREEN |
| Governed Project Context | DESIGNED / successor work; UI context decisions established |
| Requirement Authority | GREEN / requirement library completed and closed in verified scope |
| Reference Authority | GREEN |
| Validation Context | GREEN |
| Validation Engine | GREEN |
| Object Validator | GREEN |
| Correction / AutoFix | GREEN in scoped flows |
| Review Lifecycle | GREEN |
| Approval Gate | GREEN |
| Canonical Information Product | GREEN |
| Persistence / History | GREEN in scoped implementation |
| Change Intelligence V1 | FINAL FROZEN V0.12 |

## 5. Current governance snapshot

| Track | State | Key point |
|---|---|---|
| CI-01 Slice 1 V0.12 | FINAL FROZEN | SHA 2F45BC7E37809802E1BF385755AEAF7215BC05D0C5308A27F0EE31D57A0BE577; narrow change taxonomy only. |
| DP-01 V5 | NOT ACCEPTED | SHA A80523A6ADD0B6B621DD6FD279F91A65FD620616A5E376EE7AB4DA48C211D4BB; preserve NOT_PROVEN and Review85. |
| Requirement Library | COMPLETED / CLOSED | Reuse; do not rebuild. |
| Product Workspace | NEXT | Read-first walking skeleton. |

## 6. What remains

| Next | Outcome |
|---|---|
| R0 - Archive / continuity update | Create one coherent 2026-10-09 continuity archive, file map and AI handoff. Do not change frozen technical authorities. |
| R1 - Product Workspace Walking Skeleton | Thin read-first UI: Organisation/Project/Building -> Information State A/B -> Compare -> Change Set -> changes/evidence/review status. Consume CI-01 read-only. |
| R2 - AIS / Verified Publish / Current | Realize publication/current workflows without collapsing Correction, Delivery, Organisation Acceptance, AIS and Current into one decision. |
| R3 - Baseline & Change Control | Declare governed baseline, compare new state through CI-01, review impact and make explicit baseline replacement decisions. |
| R4 - No-code onboarding | Configuration-driven requirement/reference onboarding, controlled publication, mappings, code lists and project templates; Requirement Library itself is already complete in verified scope. |
| R5 - Legacy source adapters | PDF/DWG/Excel/GIS/scan/CDE intake for markets where BIM models are missing. Normalize into governed information states; never pretend legacy data has BIM identity it does not possess. |
| R6 - Pilot / customer packaging | Region Blekinge reference pilot, then customer packages for healthcare/municipal/MENA use. Separate software authority from customer configuration. |

## 7. How to continue safely

- Exact artifact bytes + SHA-256 + primary acceptance/promotion/final/freeze evidence outrank narrative summaries.
- Frozen authorities are immutable. Any technical change requires a separately authorized successor; never hot-patch frozen bytes.
- Source truth > preview. A browser view, newer filename or client payload does not become truth without governed identity and evidence.
- Correction Approval != Delivery Approval != Organisation Acceptance != AIS != Verified Publish/Current.
- Fresh source + revalidation are required before canonical/current publication.
- Fail closed on stale, ambiguous, missing, inconsistent or unverifiable authority/evidence.
- Never silently guess identity/version and never use an implicit 'latest' fallback in governed execution.
- Compare-Before-Write is required where governed source writeback exists.

## 8. Files to start with

- README_FIRST_IM_PLATFORM_ARCHIVE_HANDOFF_2026-10-09.txt
- IM_PLATFORM_CURRENT_WORKING_STATE_2026-10-09.json
- IM_PLATFORM_MASTER_PROJECT_DOSSIER_2026-10-09_POST_CI01_FROZEN.docx/pdf/md
- IM_PLATFORM_FILES_AND_AUTHORITY_MAP_2026-10-09.md
- Matching ChatGPT/Claude continuation prompt
- Exact task-specific primary authority/evidence.
